The present invention describes antigenic peptides (I) comprising: (a) any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino caids. Also described: (I) an assay for the detection of a particular G protein-coupled receptor (GPCR) or a candidate polypeptide in a sample; and (2) an isolated antibody having high specificity and high affinity or avidity for a particular GPCR. (I) can be used as GPCR modulators and in gene therapy. The antigenic peptides for GPCRs are useful in detecting an antibody against a particular GPCR, and in the production of specific antibody against a particular GPCR, and in the production of specific antibody against a particular GPCR, and in the production of specific antibodies. The peptides and antibodies are also useful for detecting the presence or absence of corresponding GPCRs. The antigenic peptides for GPCRs and antibodies are useful for diagnosing and designing drugs for treating immune-related diseases, immunological-related cell proliferative GPCRs and antibodies immune diseases, eg. ALDS, Alzheimer's disease, atherosclerosis, bacterial, fungal protozoan or viral infections, atherosclerosis, bacterial, fungal protozoan or viral infections, correctivities, osteoprososis, cancer, cardiomyopathy, chonic and acute inflammation, allergies, Crohn's disease, graft versus host disease, parkinson's disease, multiple sclerosis, pain, psoriasis, concertivities, trauma, ulcers, or hypotension, renal disorders, rheumatoid arthritis, trauma, ulcers, or sepilepsy, asthma, tuberculosis, obesity, nausea, hypertension, hypotension, renal disorders, rheumatoid arthritis, trauma, ulcers, or sepilepsy, asthma, tuberculosis, obesity, nausea, hypertension, hypotension, renal disorders, rheumatoid arthritis, trauma, ulcers, or sepilepsy, and multiple sclerosis, pain, bypotension, renal disorders, rheumatoid arthritis, trauma, ulcers, or used in immunoassays and immunodiagnosis. ABS42869 encode GPCR proteins given in ABP81675 to ABP82018, which are used in the exemplification of the prese New isolated antigenic peptides e.g., for G protein-coupled receptors (GPCR), useful for diagnosing and designing drugs for treating conditions in which GPCRs are involved, e.g. AlDS, Alzheimer's disease, cancer or 128 248 624 129 CGCCTCCCTCACGGTGGCTGTGCTCATCCTGGCCTATTTTAGGCGGCTGCACTGCACGCG 188 684 744 CAACTACATCCACATGCACCTGTTCCTGTCCTTCATGCTGCGCGCGGTGAGCATCTTCGT TGCGCTGGAGGTATTTGACCGCCTAGGCATGATCTACACCGTGGGATACTCCATGTCTCT reaaceesasererricacceceresecarearriaracacceresecracicererrerr gecerceceraecrerecrearceresecraerrinasecsecreeaedes . 9 Length 1948; Sequence 1948 BP; 405 A; 600 C; 570 G; 373 T; 0 U; 0 Other; Indels DB 8; 0; Mismatches 162; Score 966.8; DB 8, Pred. The invention relates to a combination which, comprises a number of polynucleotide probes comprising a sequence selected from one of the 1490 sequences mentioned in the specification. The combination is useful as an array element in a microarray for monitoring the expression of a number of target polynucleotides. The microarray is particularly useful in the diagnostics and immunopathology and neuropathology. The microarray is useful in diagnostics and treatment regimens, drug discovery and development, toxicological and carcinogenicity studies, corensists and paramacogenomics. The microarray is also useful for monitoring progression of diseases and for developing sophisticated profiles for the effects of currently available therapeutic drugs. The combination is also useful for purifying a suppopulation of mansa. The array can detect changes in expression in a large number of genes coding carray can detect changes in expression in a large number of genes coding various diseases including cancer e.g. adenocarcinoma and leukaemia, cumunopathise e.g. AlDS and asthma, neuropathise e.g. AlDS and asthma, neuropathise e.g. Alzheimer's disease and parkinson's disease. The present sequence represents a polynucleotide format directly from USPTO at the printed sepecification but was obtained in electronic condess when the directly from USPTO at the procession of the printed specification but was obtained in electronic procession and lacetly and new condession and lacetly and new condession and lacetly and new condession and detect condession and asthma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       128
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         624

The invention relates to a method of determining susceptibility of an individual to joint space narrowing and/or osteophyte development and/or joint pain comprising identifying whether the individual has at least one polymorphism in a polymotheride encoding at least one of the protein listed in the specification. The methods, composition and agent are useful for modulating the susceptibility of an individual to joint space narrowing and/or osteophyte development and/or joint pain that is associated with a disease, preferably osteoarthritis. The cell line and the non-human animal are useful for screening for an agent for diagnosing an individual having susceptibility to joint space narrowing and/or osteophyte development and/or joint pain. This sequence corresponds to the polymodeotide encoding a protein listed in the specification. (Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Determining susceptibility of an individual to joint space narrowing, osteophyte development and/or joint pain comprises identifying whether the individual has at least one polymorphism in a polymucleotide encoding

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                         1 atgggggccgcccggatcgc......tcatgtgactgggcactagg 1320

1st strand cDNA was primed with a Not1-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies,
